WOUND CARE & SURGERY

The Royal Marsden
School of Cancer Nursing and Rehabilitation

We offer a wide range of programmes and stand alone modules aimed at health care professionals dedicated to cancer care including:

---

**Acute Cancer Care**
12, 19, 26 May, 2 and 9 April 2011
15 credits at Level 5 or 6
£795

With the move towards community based cancer care (DOH, 2007) and the advances in cancer treatment, the nature of admissions for inpatient care has become ever more acute. This module aims to equip the student with an understanding of how cancer and its treatment can lead to the acute deterioration of the patient and how to assess and manage the rapidly changing situation. To ensure when looking after the acutely ill cancer patient the student has the knowledge to confidently care for them and their significant others.

---

**Clinical Trials in Cancer Care**
20, 21, 22, 23 and 24 June 2011
15 credits at Level 6 or 7
£795

This module has been developed in order to meet the educational needs of students who wish to develop an understanding of the complex issues that are faced by researchers when conducting clinical trials in the UK. It will provide students with an opportunity to develop their knowledge of the clinical research process. Students will also develop their understanding of the Regulatory Frameworks and Codes of Practice that govern the research process in healthcare in the UK. They will also identify and discuss some of the complexities of organising and running these research studies. Students will also explore the ethical and legal aspects that underpin clinical research including the role of patients as key stakeholders in the research process.

To apply or to find out more information on these module and the range of other courses we offer at The School of Cancer Nursing and Rehabilitation, please contact us on 020 7808 2900 or by e-mail at school@rmh.nhs.uk
