The Royal Marsden School of Cancer Nursing and Rehabilitation

We offer a wide range of programmes and stand alone modules aimed at health care professionals dedicated to cancer care including:

**Head and Neck Cancer Care**
25, 26, 27, 28 and 29 July 2011
15 credits at Level 5 or 6
£795

Head and neck cancers are a group which includes cancers of the larynx; pharynx; oral and naso-pharyngeal cancers as well as thyroid cancers. This group of cancers often have a devastating effect on the lives of patients. This in itself has a major impact on the patient and their carers and also presents a significant challenge to healthcare professionals working in this area of cancer care. This module aims to provide an opportunity for nurses and allied health care professionals to develop their theoretical and practical skills in caring for this group of patients.

**Chemotherapy in Cancer Care**
1, 2, 3, 4 and 5 August 2011
15 credits at Level 5 or 6
£795

This module provides nurses with the theory that underpins the delivery of holistic care to patients with cancer receiving treatment with chemotherapy (i.e. any antineoplastic agent - cytotoxic or cytostatic). Focusing on the evidence base, the module addresses the patho-physiology of cancer, chemotherapy as a treatment modality and the legal, ethical and safety issues inherent in its use. The module will help the student to develop the skills to identify and manage the common side effects of chemotherapy, taking into account the impact of this treatment on the patient’s physical, psychological and psychosocial wellbeing.

To apply or to find out more information on these modules and the range of other courses we offer at The School of Cancer Nursing and Rehabilitation, please contact us on 020 7808 2900 or by e-mail at school@rmh.nhs.uk
